## Profile

---

I am a Computer Engineer with over 8 years of experience in programming various complexities and languages including C, C++, C#, and Python. Use of platforms such as Jira and Git software, using various IDEs to create back and front-end applications and webpages or web-based programs. Extensive use of Servers, SQL, Shell, and Bash. Due to my use of varied languages and frameworks, I am looking for Junior roles.

## Work experience

---

### Alexander Battery Technologies

#### Full Stack Software Developer

*11/2021 – present*

Developing software for battery testing and creation, including writing C++ for Arduinos, Microcontroller Hex codes and I2C commands. I also created the C# UWP software for the improvement and testing of batteries, based on .NET Framework with small .NET Core features. As the Full Stack Software Developer, I work on both the front-end and back-end of all programs and Intranet websites. These include using HTML, CSS, React and other Javascripts I maintain all Repositories and deal with all Merges, Commits and other maintenance of GitLab. Continuous integration and development of all current software and firmware such as WPF, WinForms, C and C++ Firmware.

### Vertex

#### CAD Software Developer and Designer

*01/2019 – 06/2020*

Programming and customisation of CAD software for customers including making custom connections and Profile sections. Talking with customers to assist in any software issues including creating bug reports and fixing bugs. Doing design work for the globe including LGS structures and Modular buildings. Training customers and staff. Creation of webpages using Javascript, HTML and CSS for download links of new versions of the live program. Publishing versions after updates. Creating and maintaining the AR and VR phone app used to identify “Stud” LGS members and their location in the plan.

## **CleverClogsITServices (Myself)**
